Steel doors

# Brand Quality from Hörmann

Top safety and reliability

## In-house product development

Growing and constantly changing functional and safety requirements necessitate continuous new construction and equipment developments and improvements, especially when it comes to moveable construction components such as doors. In this area, our qualified development teams time and again prove their great specialised expertise.

## Highly sophisticated production methods

We at Hörmann rely on the latest production technology at our specialised factories. Computer-controlled operations ensure dimensionally accurate elements with perfectly fitted fittings and functional parts.

**Trust the market leader**  
**With over 20 million doors and operators sold,**  
**Hörmann is Number 1 in Europe.**

As Europe's leading manufacturer of doors, hinged doors, frames and operators, we are committed to high product and service quality. This is how we set standards on an international scale.

Highly-specialised factories develop and produce construction components that are marked by excellent quality, functional safety and a long service life.

Our presence in the global economy's key regions makes us a strong, future-oriented partner for residential construction.

### **An eye on the future**

Hörmann is setting a good example. This is why, from 2013 onwards, the company will obtain up to 40 % of its required energy from green sources and will continue to increase this percentage. At the same time, many tonnes of CO<sub>2</sub> are saved each year thanks to the introduction of an intelligent and certified energy management system. And last but not least, Hörmann offers products for sustainable construction.

### **All-inclusive service**

Hörmann not only provides you with top-class products, but also offers first-class service both before and after you make your purchase. Authorised Hörmann dealers stand by this promise and offer you competent and friendly advice, correct dismantling of old doors, including their environmentally friendly disposal and careful measuring to ensure fitting that is perfect, fast and clean.

# Hörmann Garage Doors

More convenience and security every day

### **Sectional garage doors**

Hörmann's automatic sectional doors open vertically, saving space in the garage and in front of the garage. Sectional doors fit anywhere, no matter whether your garage opening is rectangular or chamfered, or has a segmental or a Norman arch. For especially high thermal insulation, we recommend an LPU door with 42-mm-thick sections and a ThermoFrame frame connection to provide a thermal break between the door and wall. Therefore, they are ideally suited for subsequent modernisation as well.

### **Up-and-over garage doors**

The garage door classic since 1952 not only has an excellent price/performance ratio. A large number of door infills also lets you match the garage door to the architecture of your home.

### **RollMatic roller garage door**

RollMatic roller garage doors are an especially space-saving option. Their design principle permits full use of the garage ceiling area. Made of high-quality corrosion-free aluminium, the RollMatic door profile is equipped with modern Hörmann operator technology as standard. An innovative tension spring assembly ensures easy door travel that is gentle on the operator. Nine colours and two attractive Decograin timber design surfaces provide numerous design possibilities.

### **Side sliding sectional doors**

Hörmann's side sectional door is intended for special fitting situations: in contrast to an up-and-over door, sectional door or roller garage door, this type of door opens to the side instead of upwards. This is especially advantageous if, for example, the garage ceiling has to remain free to store a surfboard or the door leaf cannot be parked underneath the ceiling due to construction reasons (because of drainpipes or a sloped roof) or the door simply cannot be fixed to the ceiling.

# Hörmann Garage Door and Entrance Gate Operators

Premium quality from the door and operator specialists

HS 5 BS  
hand transmitter

FFL 12 BS  
radio finger-scan

## Garage door operators

Hörmann garage door operators provide convenience and security. With the fast, convenient SupraMatic, the inexpensive ProMatic as well as the ProMatic Akku, the operator for garages without a power connection, Hörmann offers innovative operator technology.

## Entrance gate operators

Hörmann's range of entrance gate operators includes a streamlined RotaMatic hinged gate operator, the RotaMatic Akku for areas without a power connection and the DTU 250 underground operator as an almost invisible solution for private applications. The range also covers the powerful DTH 700 for commercial applications and the compact and reliable LineaMatic and STA 400 sliding gate operators.

## BiSecur radio system

You no longer have to go out in all kinds of weather to check that the garage door is closed. Using an LED on the hand transmitter, BiSecur, the bi-directional radio system for garage door and entrance gate operators, shows whether the door is closed. The new hand transmitters are not only characterised by an increase in comfort: they fit your hand perfectly thanks to a high-quality housing with an elegant, glossy surface. In addition, 128-bit encryption provides additional security against unauthorised access.

## Comfort accessories

The varied accessories programme offers high-quality mobile and stationary accessories for all fitting situations. Accessories range from the micro hand transmitter to code switches and finger-scans, as well as special solutions such as the emergency battery. Hörmann provides you with a completely standardised and compatible system with a perfectly matched door, operator and control element. As a result, you can use your hand transmitter to operate the garage door, entrance gate and entrance door and do not need to coordinate components from different manufacturers.

# Hörmann Entrance Doors

The best choice for your home

WK 2 security equipment  
for aluminium entrance doors,  
side elements and transom lights

## Aluminium entrance doors

Hörmann is the perfect choice for special entrance doors. The high-quality aluminium retains its shape, does not rot – and never needs to be painted. Even after years of use, your Hörmann entrance door will look like new. Choose from 3 different versions to receive an individual look and thermal insulation: the inexpensive basic version TopComfort, the elegant leaf-overlapping version TopPrestige or the TopPrestigePlus version with additional thermal insulation and design.

## Steel entrance doors

Steel ThermoPro doors for main and side entrances are available in a large selection of styles. Thanks to standard multiple-point locking, these inexpensive doors give you a feeling of security, save energy through excellent thermal insulation and provide a stylish appearance for your home.

## Design garage doors and entrance doors

Stylish garage and door combinations, designer elements made of stainless steel or glass for contemporary architecture. Thanks to the many design variations with stylishly arranged embellishments, these design garage doors, particularly when combined with design entrance doors, become real eye-catchers and an expression of your good taste.

# Hörmann Doors for Your Home

Quality from the basement to the roof

## **KSI Thermo and MZ Thermo: Up to 30 % better thermal insulation**

### **Multi-purpose doors**

A multi-purpose door must withstand a lot over many years. The MZ multi-purpose door is stable, highly durable and weather-resistant and has been tried and tested for over forty years. It is ideal for both inside and outside. An MZ Thermo door with thermal break is also available and provides up to 30 % better thermal insulation compared to a conventional multi-purpose door.

### **Security doors**

Hörmann has the right security door for every demand. They are available with standard WK 2, WK 3 or WK 4 security equipment and optionally with door leaves with thermal break to provide the best thermal insulation when used as an external door for basements, outbuildings and garages.

### **Fire-rated doors**

Profit from Hörmann's expertise in fire protection: for doors in boiler rooms and oil tank storage rooms, but also for the passage from the garage to the house. The WAT fire-rated security door can also be optimally matched to the internal doors in your home, even timber doors.

### **Internal doors**

Inexpensive and sturdy steel ZK internal doors are set apart by many advantageous features and can be used from the basement up to the loft. They are durable, resistant to stains, stable and close quietly and easily. They come in almost any colour and are ideal for modernising your home.

# Hörmann Garage Doors and Doors for Blocks of Flats

An economical overall solution with numerous design possibilities

## ET / ST 500 collective garage door

Selecting a Hörmann ET / ST 500 collective garage door is a decision for the future. A decision for safety, durability and low maintenance costs for years to come. A wide choice of infill variations and individual, on-site design options allow the collective garage door to be adapted to either existing or planned facades.

## Entrance doors with letter box systems

The entrance door to a block of flats sets the tone for the entire building. Hörmann offers a large variety of individual possibilities for attractive designs. The entrance door can be combined with side elements, transom lights and letter box systems to fit your needs exactly.

## Apartment entrance doors

Apartment entrance doors must comply with a variety of requirements – they should not overly strain the construction or modernisation budget, have a long service life and be robust. At the same time, they have to be fire and break-in resistant. WAT fire-rated security doors come with T30 fire resistance and WK 2 security equipment and can be optimally matched to the doors inside the residence.

## Steel frames

Hörmann steel frames are particularly robust and long-lasting. The hot-galvanized, powder-coated primer surface can be painted individually, letting you match it perfectly to the look of the steel or timber doors used. Hörmann also has various types of frames: corner frames, profile frames, special frames, single-shell, double-shell or plug-and-screw frames with special hinge systems and sound-absorbing seals, as well as special equipment for more comfort and safety.
